**DETAILED ACTION**

***Priority***

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. Norway 20033876, filed on 09/02/2003.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kilgor US patent 4,338,525.
4. Regarding claim 1. Kilgor'525 discloses a marine propulsion system having a driving machine (10) for the running of an electrical generator (12), which is further connected to an electrical propulsion motor (16) with connection to a propeller (24) or similar propulsion device, characterized in that the generator (12) and the propulsion motor (16) are permanently magnetized synchronous machines, the two synchronous machines have substantially the same operating characteristics, and they are directly connected together with a rigid electrical connection (20).
5. Regarding claim 2 Kilgor'525 discloses a marine propulsion system having the generator (12) inherently has a lower number of poles than the propulsion motor (16).

3. Regarding claim 3 Kilgor'525 discloses a marine propulsion system comprises a frequency converter (22) that feeds a consumption network with stable frequency from the generator (12).

4. Regarding claim 4 Kilgor'525 discloses a marine propulsion system comprising an auxiliary generator (28), which is run by the driving machine (10) .

5. Regarding claim 5. Kilgor'525 discloses a marine propulsion system comprising an auxiliary converter (22), which is used for starting and for control of the direction of rotation, as the driving machine(10) is arranged for being run with reduced rotational speed, for instance about half rotational speed, for synchronizing from reduced frequency, when the auxiliary converter and the generator are parallel-coupled (see column 7 lines 30 65).
